SAS Art Philosophy

SAS mission in our art program is to develop the full potential for each of our students in the visual arts. By learning to visually communicate our students will understand the history and role of art as an expression of human culture. Through this process students will build skills to enable individual expression and become effective creative problem solvers. By training students to think both creatively and analytically, we believe that art classes will help equip students to draw upon knowledge and techniques of the past, to weigh the questions of the present, and to envision possibilities of the future.
