The Singapore American School science program emphasizes an inquiry-based, hands-on, real world approach that makes connections across disciplines and leads to student understanding of essential concepts, skills and processes.

To encourage responsible and ethical citizens in a global community, the SAS science program promotes the SAS Core Values and scientific habits of mind: curiosity, passion, perseverance, caring, and action.

The SAS science program recognizes that scientific problem solving, critical and creative thinking skills, and collaboration prepare students for an ever-changing world.
